

Description:

After participating the workshop hosted by SecOffs team, Joe Miner has intercepted the following login payload during a pentest on the legacy academic website start with the ominous letter "C":

user: jminer\npass_digest: 482c811da5d5b4bc6d497ffa98491e38

He also retrieved some comments, providing additional insight on the spaghetti code that hurt his eyes the longer he looked at it. The source code read:

```
// Nested conditionals, 16 then 32 with wrapping
```

Can you figure out what password leads to the hash?

Flag format: flag{password}
